BUSINESS ADDRESS

Department of Economics, 5067 Lee Shau Kee Business Building
The Hong Kong University of Science and Technology, Clear Water Bay, Kowloon, Hong Kong

RESEARCH FIELDS

Industrial Organization, Digital Economics, Quantitative Marketing

EDUCATION

Hong Kong University of Science and Technology

Ph.D. in Economics	2022 – 2027 (expected)
M.Phil. in Economics	2020 – 2022
B.Sc. in Mathematics and Economics (Minor in Actuarial Mathematics)	2015 – 2019

WORKING PAPERS

- "Designing Return Policy in E-Commerce: A Trade-off between Purchase and Return Efficiency" *(Job Market Paper)*

  Abstract: We study the effect of return policies by asking whether they encourage efficient returns and purchases. A stricter return policy curbs inefficient ex-post returns, but the resulting lower return rates make higher product prices more attractive for sellers, leading to possible exclusion of ex-ante efficient purchases. We compare automatic coverage that reimburses return-shipping costs (RI) with optional coverage (CI) by estimating a structural model of purchase, insurance, and return decisions under monopoly pricing across six apparel categories. A lenient return policy like RI performs better in high-margin, high-salvage categories by expanding valuable purchases, whereas a strict return policy like CI performs better in thinner-margin categories by curbing excessive returns. Partial RPD, a menu pairing a discounted price with a medium restocking fee as penalty, performs better than RI and CI for most categories by better balancing purchase and return efficiency.

  Presented at (for scheduled):* APIOC 2026*; 2026 Econometric Society Australasia Meeting (ESAM 2026)*; 中國經濟學年會夏季論壇 2026*; HKUST Business School PhD Conference; CEP Brownbag in HKUST.

- "Product Design with Heterogeneous Search Costs", with Pak Hung AU

  Abstract: Building on Wolinsky's (1986) sequential search model with differentiated products, this paper

introduces search cost heterogeneity to analyze how firms leverage observable product designs to influence consumer search behavior. In equilibrium, consumers' search patterns form a partitioned structure: those with low search costs tend to seek niche products, while consumers facing higher search costs gravitate toward standardized products. In the case of two product designs, a reduction in search costs may lead to higher prices for both if the endogenous shift in consumer search modes—the composition effect—dominates the search-encouraging effect. Additionally, we demonstrate that prices respond asymmetrically to decreases in search costs based on the relative position within the distribution where the shock occurs.

Presented at: APIOC 2023; AMES 2023 NTU Singapore.

WORK IN PROGRESS

- "Pass-Through and Incidence with Product Returns", with Ce Bian and Liang Zhao

  Abstract: We study pass-through and incidence with product returns. In contrast to the case without returns, a tax such as a platform commission fee or a sales tax can create negative pass-through and improve social welfare. When a high price significantly raises consumers' return probability, the seller reduces the quantity supplied because of a lower effective margin. This downward-sloping supply curve can lower the equilibrium price in response to a tax increase, raising social surplus by reducing the return rate.

- "Too Much Unsold Stock?: Environmental Consequences of Price Commitment", with Kohei Kawaguchi and Kei Kawai

  Abstract: Resale price maintenance is procompetitive because it encourages sellers to carry inventory in the low-demand state. When realized demand falls short of that inventory, however, the seller cannot lower the price to clear the market, and the unsold copies are returned at an environmental cost. We build a dynamic oligopoly model with demand uncertainty, estimate it on monthly bookstore data, and ask how much unsold stock is due to price commitment and how a deposit-refund tax can reduce waste.

EXPERIENCE

Research

Research Assistant for Prof. Benjamin Bernard, National Taiwan University 2020

Teaching

Lecturer, Math Camp for MSc in Economics, HKUST (4.53/5) 2026

Teaching Assistant Coordinator, Business School, HKUST 2025 – 2026

Teaching Assistant, Department of Economics, HKUST (average 4.72/5) 2020 – 2025

ECON2123 – Macroeconomics (4.53/5)
ECON4134 – Economics of Uncertainty and Information (4.83/5)
ECON4999T – Economics of Uncertainty and Information (4.56/5)
ECON5210 – Microeconomic Theory I (4.85/5; 4.82/5)

FELLOWSHIPS AND AWARDS

Research Travel Grant	2023; 2026
Red Bird PhD Award	2022
Postgraduate Studentship from the HKUST	2020 – present
Academic Achievement Medal	2019
University Scholarship (730K HKD)	2015 – 2019

SKILLS

Technical Skills: R, Python, C++, LaTeX, AWS

Languages: English (fluent), Mandarin (native), Cantonese (basic)

教育背景

香港科技大学

经济学博士	2022 – 2027（预计）
经济学哲学硕士（M.Phil.）	2020 – 2022
数学与经济学理学学士（副修精算数学）	2015 – 2019

工作论文

- 《电商退货政策设计：购买效率与退货效率的权衡》（Designing Return Policy in E-Commerce: A Trade-off between Purchase and Return Efficiency）（求职论文）

  摘要：本文研究退货政策是否同时促进有效退货与有效购买。更严格的退货政策可以抑制事后无效退货，但退货率下降会使卖家更倾向于提高价格，从而可能把事前有效的购买排除在外。我们在六个服装品类、垄断定价下估计购买、运费险与退货决策的结构模型，比较自动报销退货运费的保障（RI）与可选保障（CI）。宽松政策（如 RI）在高毛利、高残值品类中表现更好，因为它扩大了有价值的购买；严格政策（如 CI）在毛利较薄的品类中表现更好，因为它抑制过多退货。部分退货罚金（Partial RPD）——将折扣价与中等程度补货费配对的菜单——在多数品类中比 RI 和 CI 更好地平衡购买效率与退货效率。

  报告（* 为已安排）： APIOC 2026*；2026 Econometric Society Australasia Meeting（ESAM 2026）*；中国经济学年会夏季论坛 2026*；香港科技大学商学院博士生会议；香港科技大学 CEP Brownbag。

- 《异质搜寻成本下的产品设计》（Product Design with Heterogeneous Search Costs），与 Pak Hung Au

  摘要：在 Wolinsky（1986）差异化产品序贯搜寻模型的基础上，本文引入搜寻成本异质性，分析企业如何利用可观察的产品设计影响消费者的搜寻行为。均衡中，消费者的搜寻呈现分割结构：搜寻成本较低者倾向于寻找利基产品，搜寻成本较高者倾向于标准化产品。在两种产品设计下，若搜寻模式的内生转变（构成效应）主导了鼓励搜寻的效应，搜寻成本下降可能使两种产品的价格同时上升。此外，价格对搜寻成本下降的反应取决于冲击落在成本分布中的位置，因而并不对称。

  报告： APIOC 2023；AMES 2023，新加坡南洋理工大学。

进行中的研究

- 《含退货的价格转嫁与税负归宿》(Pass-Through and Incidence with Product Returns)，与 Ce Bian、Liang Zhao

  摘要：本文研究存在产品退货时的价格转嫁与税负归宿。与无退货情形不同，平台佣金或销售税可以产生负向转嫁并提高社会福利。当高价格显著提高消费者的退货概率时，有效利润率下降，卖家减少供给。这条向下倾斜的供给曲线可以使均衡价格随税收上升而下降，并通过降低退货率提高社会剩余。

- 《滞销过多？价格承诺的环境后果》(Too Much Unsold Stock?: Environmental Consequences of Price Commitment)，与 Kohei Kawaguchi、Kei Kawai

  摘要：转售价格维持具有促进竞争的作用，因为它鼓励卖家在低需求状态下持有库存。但当实现需求低于库存时，卖家不能降价出清，未售出的商品被退回并带来环境成本。我们构建含需求不确定性的动态寡头模型，用月度书店数据估计，并考察有多少滞销来自价格承诺，以及押金—退款税如何减少浪费。
