Hiring Team
Keystone — London
Re: Full Time Economist 2027 (Greenhouse 8211974)

Dear Hiring Team,

I am writing to apply for the Full Time Economist 2027 role in Keystone's London office. I am a Ph.D. candidate in Economics at HKUST, specializing in empirical industrial organization and digital economics, expected to graduate in June 2027 (and able to finish earlier if helpful). Keystone's digital-competition work is a strong match for my research. One example is the UK advertisers' claim that Google used its buy-side tools (Google Ads and DV360) and its publisher ad server (DFP) to steer open-web display ads through its own exchange, AdX—the kind of multi-sided platform conduct and self-preferencing question I want to work on as an economist.

The posting asks for someone who can turn large data and economic frameworks into clear arguments under high stakes. That is how I already work. My job market paper studies Taobao apparel return policy: I clean large transaction data, estimate a structural model of purchase, return-shipping insurance, and return decisions, and rank policies by seller profit, consumer surplus, and social welfare. With Professors Kohei Kawaguchi and Kei Kawai, I study pricing and inventory under resale price maintenance using monthly bookstore point-of-sale records, combining descriptive evidence, regressions, and a dynamic oligopoly model. I work mainly in Python, R, and C++ on AWS and HPC/SLURM; I check results carefully, test assumptions, and explain what the numbers imply for the next decision. I also apply merger simulation, market entry and exit counterfactuals, and firm-conduct identification.

I have attached my CV. Thank you for your consideration; I would be glad to provide my job market paper or any further materials.

Sincerely,

Ke-Cheng Hsu (Clio)
